MEMORANDUM FOR: Mr. William N. Morell, Jr.
Director
Research and Reports
Central Intelligence Agency

SUBJECT: Zambia: Transport and Supply Problems Stemming
From the Rhodesian Affair

Thank you for your excellent Study of "Zambia: Transport and Supply Problems Stemming from the Rhodesian Affair". It provides a very useful perspective on the problem and the difficulties of any real quick solution. I am reluctant, therefore, to pick two "nits". The increase in POL consumption in late 1966 (para 2 page 12) can hardly be based on economic expansion when copper production was off sharply. Rather, it would seem to come more from efforts to substitute fuel oil for Wankie Coal. Also in the facing chart the end of our airlift is dated 7 May whereas flying stopped on 30 April. The difference probably represents a lag in the truck haul from Lubumbashi where our airlift terminated.
